

Locating a Site Assessor

A site assessor samples the soil during an underground storage tank removal to determine if a petroleum discharge has occurred. The site assessor presents the findings of this work in a written report that is submitted to the Department. The site assessment must meet the requirements of Chapter 691 Rules for Underground Oil Storage Facilities. The Department does not certify, endorse or register site assessors and, consequently, has not maintained a complete list of assessors. The following companies have either asked to be added to this list or have submitted a site assessment to the Department within the last year.

Tank Installers/Removers: The Department certifies underground tank installers/removers. Depending on the type of oil product stored in the UST a certified installer/remover may be required when an underground storage tank is removed. These contractors generally subcontract assessors or may recommend an assessor. The Department can provide a list of certified tank installers/removers.

Yellow Pages: The following categories may be helpful:

Engineers Engineers-Environmental Engineers-Geotechnical
Engineers-Civil Engineers-Consulting Geologists
Environmental & Ecological Products & Svces

List: Some of these firms in this list have more than one office location. Firms from outside of Maine are not listed.
